

## Staging

Our staging system is manufactured locally to meet Australian standards. Stage tops are 1.8m x 1.2m locked onto steel stage frames and held upright with steel cross braces.

Adjustable legs provide variable height options.

Accessories include:

- Aluminium handrails.
- Stairs and ramps (to meet Australian standards).
- Black skirt to hide stage structure. Stagerisers (rolling or static).
- Carpet.

The stage system can be built on uneven ground, set to any height and is sturdy enough to support anything from 4WD vehicles to sensitive audio visual equipment.

Our superior stage system can be erected on any ground level or surface, on any incline, and all without compromising the secure sturdiness of the structure. The staging system is so secure and sturdy, that we have used it to erect camera towers, where it is of the utmost importance that there be no movement in the structure.

We also have high quality rolling risers and dj decks, either rolling or static.
